# Licensing MT5.

Licensing is done by MQL5 Market (MM), they have a proven system over years.

Because MM is for MT4 and MT5 terminals an extra EA (EA_License_check_V1.01.ex4) was needed to take care of the licensing of the *Instrument backtester*.

The installation of the EA has to be done as described:

- Down load the MT4/MT5 folder from git hub.
- Save the EA in the expert folder of your MT4 or MT5 terminal, in which you have the license downloaded. The ES is under the subfolder "**Expert**".
- This EA uses some libraries for socket communication. These libraries have to be installed too in the MT4/MT5 terminal under the "**Include**" folder.
    - Here you see 2 sub folders, named "**Mql/Lang**" and "**Zmq**".
    - Move them under the "*Include*" folder, see picture below.

- Move the EA into a chart of the MT4 / MT5 terminal. Any chart is OK.
- The EA has 3 inputs:
    - "*Folder and name backtester license indicator*" = "". Fill in the license file name from MM.
    - "*Folder and name MT5 pytrader license indicator*" = "". Fill in the name for the license filename from MM. This is the license for Pytrader_API.
    - "*Server socket port number*" = "". Port number to use.
